

# CONTENTS

<b>Preface</b>	
<b>QUANTUM SUPREMACY.....</b>	<b>5</b>

## INTRODUCTION

Quantum algorithmic gate approach and quantum supremacy.....	10
General structure of QA's.....	12
Applications of QAG and Quantum Supremacy.....	21
Quantum control for quantum computing.....	23
The benefits of quantum control across the quantum computing stack.....	25

## Chapter 1

<b>BASIC DEFINITIONS OF QUANTUM COMPUTING.....</b>	<b>29</b>
--	-----------

1.1. Introduction: Main definitions and constraints of quantum computing.....	29
1.2. Short history of quantum computing.....	32
1.3. State space of quantum mechanical systems.....	34
1.4. Quantum information.....	35
1.4.1. <i>A single qubit.....</i>	<i>35</i>
1.4.2. <i>Multiple qubits.....</i>	<i>37</i>
1.5. Quantum gates.....	39
1.5.1. <i>Single qubit gates.....</i>	<i>40</i>
1.6. Controlled operations.....	44
1.7. Sets of universal quantum gates.....	45
1.8. Decomposition of unitary transformations.....	47
1.9. Oracle gates.....	49
1.10. Projective measurements.....	50
1.11. Quantum circuits.....	52
1.12. Intermediate measurements.....	54
1.12.1. <i>Mutually unbiased computational bases.....</i>	<i>55</i>
1.13. Circuit complexity measures.....	68
1.14. Quantum computational complexity.....	69
1.14.1. <i>Complexity measures for quantum computational circuits.....</i>	<i>69</i>

1.14.2. Information analysis of quantum complexity of QAs: Quantum query tree complexity.....	75
1.15. Kolmogorov complexity of quantum query algorithms.....	76
1.16. Basic Programming Techniques and Simple Quantum Algorithms.....	78
1.17. The Deutsch—Jozsa Problem.....	78
1.17.1. Quantum Interference.....	80
1.17.2. Quantum teleportation.....	81
References to Chapter 1.....	83

## Chapter 2

<b>INFORMATION DYNAMIC ANALYSIS AND MEASURE OF QUANTUM ALGORITHM'S COMPUTATIONAL INTELLIGENCE.....</b>	<b>86</b>
2.1. About quantum information quantities.....	86
2.2. Information analysis axioms of quantum algorithm dynamic evolution.....	92
2.3. Information intelligent measure of QA's (principle 5).....	95
2.4. Information analysis and measures of the quantum decision making algorithm computational intelligence.....	96
2.4.1. Information analysis of Deutsch algorithm.....	97
2.4.2. Information analysis of QAG dynamics and intelligent output states: Deutsch—Jozsa algorithm.....	99
2.5. Information analysis of Shor's quantum search algorithm: The information role of entanglement and interference in Shor's QAG.....	113
2.6. Information-theoretical analysis of Grover's quantum search algorithm.....	129
2.7. Simulation results of QA-termination problem solution based on principle of Shannon/von Neumann minimum entropy.....	135
2.7.1. QA-termination problem solving based on minimum Shannon/von Neumann dynamic simulation entropy.....	135
2.7.2. Analysis of QA-termination problem solving based on minimum Shannon/von Neumann dynamic simulation entropy.....	141
References to Chapter 2.....	144
APPENDIX TO CHAPTER 2. Main properties of quantum information and entropy amounts.....	145
A2.1. Some Basic Facts about QM Systems.....	146
A2.1.1. The partial trace.....	146
A2.1.2. Classical Shannon Entropy Definition.....	147
A2.1.3. Relationship Formulas for Shannon Entropy.....	147
A2.1.4. von Neumann Entropy Definition.....	147

A2.1.5. Conversion Formulas for the von Neumann Entropy.....	148
A2.2. Some properties of Von Neumann Entropy for Qubit Ensembles: Case study.....	151
A2.3. Analysis and Summary of Cases I, II, and III.....	152
A2.3.1. Case I (Classical).....	152
A2.3.2. Case II (Classical) Correlated Qubits: $S(AB) = 1$ & $S(A) = 1 = S(B)$ .....	154
A2.3.3. Case III (Nonclassical-Purely QM) Entangled (Supercorrelated) Qubits: $S(AB) = 1$ & $S(A) = 1 = S(B)$ .....	154

### Chapter 3

<b>DESIGN INFORMATION TECHNOLOGY OF QUANTUM ALGORITHM GATES.....</b>	<b>159</b>
3.1. General structure of the quantum algorithmic gate design method.....	159
3.1.1. Main QAG's and main quantum operators.....	162
3.2. Design technology of quantum algorithmic gate boxes and simulation system.....	164
3.2.1. Encoder.....	166
3.2.2. Quantum block.....	168
3.2.3. Decoder.....	170
3.3. Examples of design method application: QA Benchmark's gate design and simulation of decision making QA.....	170
3.3.1. Deutsch's Algorithm.....	170
3.3.2. Deutsch—Jozsa's algorithm.....	185
3.3.3. Simon's Algorithm.....	213
References to Chapter 3.....	228

### Appendix 1

<b>BASICS RESULTS OF QUANTUM INFORMATION THEORY FOR THE STUDY OF QUANTUM ALGORITHM DYNAMIC EVOLUTION.....</b>	<b>230</b>
A1.1. Basic concept of information theory: Interrelation quantum entropy with measures of entanglement.....	230
A1.1.1. introduction.....	230
A1.1.2. Information-theoretical models of quantum system evolution and irreversible measurements.....	231
A1.1.3. Quantum operations and von Neumann entropy.....	237
A1.1.4. von Neumann entropy and relevant measures of quantum information theory.....	239
A1.1.5. Main information measures.....	240
A1.1.6. Relative entropy.....	245
A1.1.7. Entanglement.....	249

Al .2. Basic properties of von Neumann entropy and Wigner—Yanase—Dyson skew entropy.....	250
A 1.2.1. <i>Partial trace, entropy inequalities and skew-entropy</i> .....	250
A 1.2.2. <i>Accessible information</i> .....	255
Al .3. Classical, quantum and total correlations in quantum state: Bound amount of accessible information extraction.....	259
A 1.3.1. <i>Connections between accessible information and quantum operations</i> .....	263
A 1.3.2. <i>Total, classical and quantum correlations: Examples of interrelations between of covariance, correlation and entanglement measures</i> .....	264
A 1.3.3. <i>Wigner—Yanase—Dyson skew information measure</i> .....	270
A 1.3.4. <i>Efficient measurements and bounds on the accessible mutual information</i> .....	275
Al .4. Information (communication) capacity of quantum computing.....	278
A 1.4.1. <i>Communication model of quantum computing (Bose S., Rallan L, and Vedral K, 2000)</i> .....	279
A 1.4.2. <i>Application of information formalism to any general quantum search algorithm</i> .....	280
Al .5. Intelligent coherent states with minimum uncertainty and maximal information.....	283
References to Appendix 1.....	288

## Appendix 2

<b>MODELS OF ENTANGLEMENT-FREE ALGORITHMS</b> .....	290
A2.1. Models of entanglement-free algorithms and classical efficient simulation of quantum strategies without entanglement.....	290
A2.1.1. <i>Quantum game approach</i> .....	292
A2.1.2. <i>Interrelations between QAs with oracles and quantum games structures</i> .....	297
A2.1.3. <i>Entanglement-free QA based on a pseudo-pure quantum state</i> .....	307
A2.2. Exponential speed-up of QA.....	311
