| PREFACE..... | 5 |
| Introduction | |
| QUANTUM ALGORITHM GATE COMPUTING SUPREMACY - QUANTUM DEEP LEARNING APPLICATIONS IN INTELLIGENT COGNITIVE CONTROL AND ROBOTICS..... | 55 |
| Hardware..... | 70 |
| Software..... | 79 |
| Quantum supremacy of intelligent control..... | 81 |
| Chapter 1 | |
| EXAMPLES OF DESIGN METHOD APPLICATION: QA'S BENCHMARK'S GATE DESIGN AND SIMULATION OF QUANTUM SEARCH ALGORITHMS..... | 91 |
| 1.1. Shor's Algorithm..... | 91 |
| 1.2. Grover's Algorithm..... | 131 |
| 1.3. Comparing QAGs..... | 160 |
| 1.3.1. <i>U ^structures analysis.</i> | 160 |
| 1.3.2. <i>Quantum gates.</i> | 160 |
| 1.4. Spatiotemporal complexity of QA simulation based on the full matrix approach..... | 162 |
| 1.4.1. <i>Spatiotemporal complexity of Grover's quantum algorithm.</i> | 162 |
| References to Chapter 1..... | 175 |
| Chapter 2 | |
| ALGORITHMIC REPRESENTATION OF THE QUANTUM OPERATORS AND FAST QUANTUM ALGORITHMS..... | 176 |
| Introduction..... | 176 |
| 2.1. Structure of QA Gate System Design..... | 178 |
| 2.2. Generalized approach in QA simulation..... | 179 |
| 2.3. Basic QA operators..... | 181 |
| 2.4. Results of classical QA gate simulation | 193 |
| 2.5. Information criteria for solution of the QSA-termination problem..... | 195 |
| 2.6. Structure and acceleration method of quantum algorithm simulation..... | 201 |
| 2.6.1. <i>Algorithmic representation of the Grover's QA.</i> | 201 |

| | |
|---|------------|
| 2.6.2. Problem-oriented approach based on structural pattern of QA state vector..... | 206 |
| References to Chapter 2..... | 215 |
| Chapter 3 | |
| GENERAL SOFTWARE/HARDWARE APPROACH IN ACCELERATION OF QC AND CLASSICALLY EFFICIENT QUANTUM ALGORITHM SIMULATION..... | 216 |
| 3.1. Fast algorithm and HW design for efficient computational intelligence of main quantum algorithm operators on classical computer..... | 217 |
| 3.2. HW implementation of main quantum algorithm operators..... | 218 |
| 3.3. Limitations of classical approaches: A new strategy of computation for entanglement and interference operators..... | 219 |
| 3.4. A new design method for entanglement and interference..... | 220 |
| 3.4.1. <i>Entanglement method and circuit design</i> | 220 |
| 3.4.2. <i>Interference method and circuit design</i> | 221 |
| 3.5. Modular system..... | 226 |
| 3.6. Simulation of a QA-computing on classical computer..... | 229 |
| 3.6.1. <i>High-level gate design of Grover's QSA</i> | 231 |
| 3.6.2. <i>Experimental testing of Benchmark—Grover's QAG</i> | 233 |
| 3.7. Software emulator of quantum algorithms..... | 237 |
| 3.7.1. <i>Structure of QA simulation system</i> | 237 |
| 3.7.2. <i>Dedicated QA emulator</i> | 243 |
| 3.8. Discussion..... | 251 |
| 3.8. Comparison of different QA simulation approaches | 252 |
| References to Chapter 3..... | 257 |
| Appendix 1 | |
| BASIC QUANTUM PROGRAMMING TECHNIQUES AND SIMPLE QUANTUM ALGORITHMS - INTRODUCTION FOR IT AND CONTROL ENGINEERING STUDENTS..... | 259 |
| A.1.1. Decision-making QA models: Deutsch's, Deutsch—Jozsa's, Simon's and Bernstein—Vazirani benchmarks QA..... | 259 |
| A. 1.1.1. <i>The Deutsch's quantum decision-making algorithm</i> | 263 |
| A. 1.1.2. <i>Deutsch—Jozsa quantum problem</i> | 272 |
| A.1.2. Simon's algorithm..... | 282 |
| A.1.3. The Bernstein—Vazirani algorithm..... | 286 |
| A.1.4. Quantum software engineering approach — Hardware Design Language..... | 295 |
| References..... | 336 |
