PREFACE	5
Introduction	
QUANTUM COMPUTING SUPREMACY ON QUANTUM GATE-BASED	
ALGORITHM MODELS	88
References	156
Chapter 1	
MAIN OPERATIONS OF QUANTUM COMPUTING AND QUANTUM GATE MATRIX	158
1.1. Main quantum operators and quantum gates	158
1.2. Unitary operation transformations of qubits and quantum algorithm gates	168
1.2.1. Computational and measurement basis states, and Walsh—Hadamard transform applications	168
1.2.2. Examples of Walsh—Hadamard transform applications in quantum algorithm computation	174
1.2.3. The Quantum Fourier transformation	188
References to Chapter 1: Textbooks on quantum computing	191
Chapter 2	
MODELS AND DESIGN OF QUANTUM ALGORITHMS FOR BEGINNERS	192
Introduction	192
2.1. Main definitions of quantum computing	192
2.1.1. The Deutsch—Jozsa algorithm	197
2.1.2. Simon's algorithm	199
2.1.3. Grover's algorithm	203
2.1.4. Shor's factorization algorithm	209
2.1.5. Quantum counting	216
2.1.6. Quantum random walks	217
2.1.7. Adiabatic quantum computation	217
2.1.8. Universality	217
2.1.9. Computability	222
2.1.10. Complexity classes	225
2.2. Grover's quantum search algorithm	229
2.2.1. Grover's QSA: models of quantum oracles and computational algorithm	229
2.2.2. Quantum oracle model	238
2.2.3. The circuit for Grover's QSA	242
2.3. Mathematical model and features of the output of a Grover's quantum search algorithm	251
2.3.1. Derivation of von Neumann of the Schrodinger equation	252
2.3.2. Examples of application solutions of Schrodinger equations in quantum information and quantum algorithms	253
2.3.3. Modified Hamilton—Jacobi and wave representation of classical mechanics	260
2.3.4. Design method of QAG	262
2.3.5. Classical efficient simulation by QAGs	264
Appendix 1 to the Chapter 2. Modified Grover's QSA	266

Appendix 2 to the Chapter 2. Design method of QAG in simulation of highly structured search algorithm.....	272
References to Chapter 2: Textbooks on quantum computing.....	277
Chapter 3	
STRUCTURE DESIGN TOOLKIT OF QUANTUM GATES.....	279
Introduction.....	279
3.1. Physical principles for quantum computation.....	279
3.2. Tools for quantum computation and quantum networks.....	281
3.3. General structure of quantum gates.....	285
3.4. Benchmarks of quantum gates for quantum algorithm's design.....	292
3.5. Basis transformations and reduction of any unitary matrices. State permutations.....	305
References to Chapter 3.....	316
Chapter 4	
STRUCTURE DESIGN TOOLKIT OF MAIN QUANTUM UNITARY TRANSFORMS.....	317
Introduction.....	317
4.1. Quantum parallelism, interference, and QFFT.....	317
4.2. Quantum computing: Unified approach to fast unitary transforms.....	329
4.3. The Walsh—Hadamard transform.....	338
4.4. The Slant transform.....	338
4.5. The Hartley transform.....	340
References to Chapter 4.....	343
Chapter 5	
STRUCTURE DESIGN TOOLKIT OF QUANTUM ALGORITHMS.....	345
Introduction.....	345
5.1. The universality of the quantum Fourier transform in forming the basis of quantum computing algorithms.....	345
5.2. Mathematical proof of the Universality of H and $P(-)$	347
5.3. Decomposition Procedure of General Finite Dimensional Unitary Transformations into a Product of Plane Unitary Transformations.....	348
5.3.1. <i>Toffoli and Control-NOT in universal quantum computation</i>	358
References to Chapter 5.....	366
Appendix AI	
QUANTUM GATE-BASED MODEL COMPUTING OF ELEMENTARY FUNCTIONS.....	368
A1.1. Algorithms.....	369
<i>Conclusion</i>	385
AI .2. The classical and quantum Fourier transform.....	387
<i>Transforms from the Fourier Theory</i>	387
<i>The quantum Fourier transform</i>	396
